

## ABSTRACT

5 The present invention provides an aqueous resin dispersion useful as a primer capable of providing plastics products, in particular polyolefin plastics products, with good coatability characteristics.

A thermocrosslinkable resin dispersion which comprises a continuous phase comprising an aqueous medium and a dispersed phase distributed therein  
10 said dispersed phase comprising particles (I) of a resin component and particles (II) of a crosslinking agent as separately dispersed from the particles (I),  
said resin component comprising, as an essential constituent thereof, a modified polyolefin resin (a) or a  
15 mixture thereof with a vinyl resin (b),  
said resin (a) having a number average molecular weight of at least 1,500 and having at least one functional group species selected from the group consisting of carboxyl, hydroxyl, mercapto, amino, isocyanate and  
20 carbodiimide groups,  
said resin (b) having a number average molecular weight of 700 to 40,000 and a glass transition temperature of -65 to 40°C, and  
said crosslinking agent having at least two groups reactive  
25 with said resin (a).
